

Six Strategies for Effective Searching

Helena VonVille, MLS, MPH

Library Director

University of Texas School of Public Health

Spring 2017

Objectives

- ▶ Be able to define what a database is
- ▶ Be able to describe the strategies for developing an effective search

What is a database?

- ▶ Formally, a "database" refers to a set of related data and the way it is organized. Access to this data is usually provided by a "database management system" (DBMS) consisting of an integrated set of computer software that allows users to interact with one or more databases and provides access to all of the data contained in the database (although restrictions may exist that limit access to particular data). The DBMS provides various functions that allow entry, storage and retrieval of large quantities of information as well as provides ways to manage how that information is organized.

Because of the close relationship between them, the term "database" is often used casually to refer to both a database and the DBMS used to manipulate it.

What is a database?

- ▶ Two parts to a literature database
 - ▶ Content
 - ▶ Set of related data
 - ▶ Interface or search engine
 - ▶ Database management system

What is a database?

▶ Content

- ▶ It's the “stuff” of a database
- ▶ Individual “stuff” is found in records
 - ▶ Each record contains many fields
 - ▶ Fields are defined by the database producer
 - Common fields are author, title, abstract, subject headings
 - Most fields are searchable

What is a database?

▶ Interface aka “search engine”

- ▶ Interface producer’s name often = interface name
- ▶ It defines the look of the database & the rules for searching
 - ▶ An analogy would be STATA vs SPSS
 - ▶ You can do the same things in both; you have to different commands to get it done!
- ▶ Plays a major role in the results you retrieve
- ▶ Which is the interface? Which is the database?
 - ▶ Ovid.....[Medline](#)
 - ▶ Ebsco.....[Medline](#)
 - ▶ NLM/NCBI.....[PubMed](#)

What is a database?

- ▶ If you have to report on database searching, you should not write that you searched Ovid or that you searched Ebsco
- ▶ Each interface offers multiple content options! Include the database searched

<input type="checkbox"/>	Ovid MEDLINE(R) without Revisions 1996 to May
<input type="checkbox"/>	Ovid MEDLINE(R) 1946 to May Week 5 2015

Six Strategies for Effective Searching

1. Create concept clusters based on the components of your topic
2. Combine terms & concepts using Boolean operators
3. Use the appropriate vocabulary
4. Revise your search strategy
5. Search more than one database
6. Learn database search rules & peculiarities

Strategy #1

Create concept clusters

▶ **First and foremost**

- ▶ You have to be able to describe what you want to research and you have to be able to break it down into individual components!

▶ **Consider the following:**

- ▶ What class are you in?
 - ▶ Make your topic appropriate to the class you are taking.
- ▶ Who is your population?
- ▶ What types of studies do you want?
- ▶ What range of years do you want?
 - ▶ Why?
- ▶ What languages do you want to include?
- ▶ What setting(s) are you interested in?

Strategy #1

Create concept clusters

- ▶ Develop a search strategy based on concept clusters
 - ▶ Three concepts generally work best
 - ▶ Utilize a variety of synonymous terms to create a concept
 - ▶ Perform broad conceptual searches
 - ▶ Combine concepts to narrow results

Strategy #1

Create concept clusters

- ▶ **Sample aim:**
 - ▶ Determine the effectiveness of interventions developed to reduce the use of tobacco products, specifically cigarettes, among adult African Americans

Strategy #1

Create concept clusters

- ▶ **Interventions**

- ▶ Interventions; health promotion; health education

- ▶ **Tobacco**

- ▶ Smoking; cigarettes; tobacco

- ▶ **African Americans**

- ▶ African Americans; Blacks; minorities

Strategy #2

Combine terms & concepts using Boolean

- ▶ Combine terms to create concepts
 - ▶ **or**
 - ▶ **OR** if searching PubMed
- ▶ Combine concepts to create a single search statement
 - ▶ **and**
 - ▶ **AND** If searching PubMed
- ▶ Remove terms (*use sparingly!*)
 - ▶ **not**
 - ▶ **NOT** if search PubMed

Strategy #2

Combine terms & concepts using Boolean

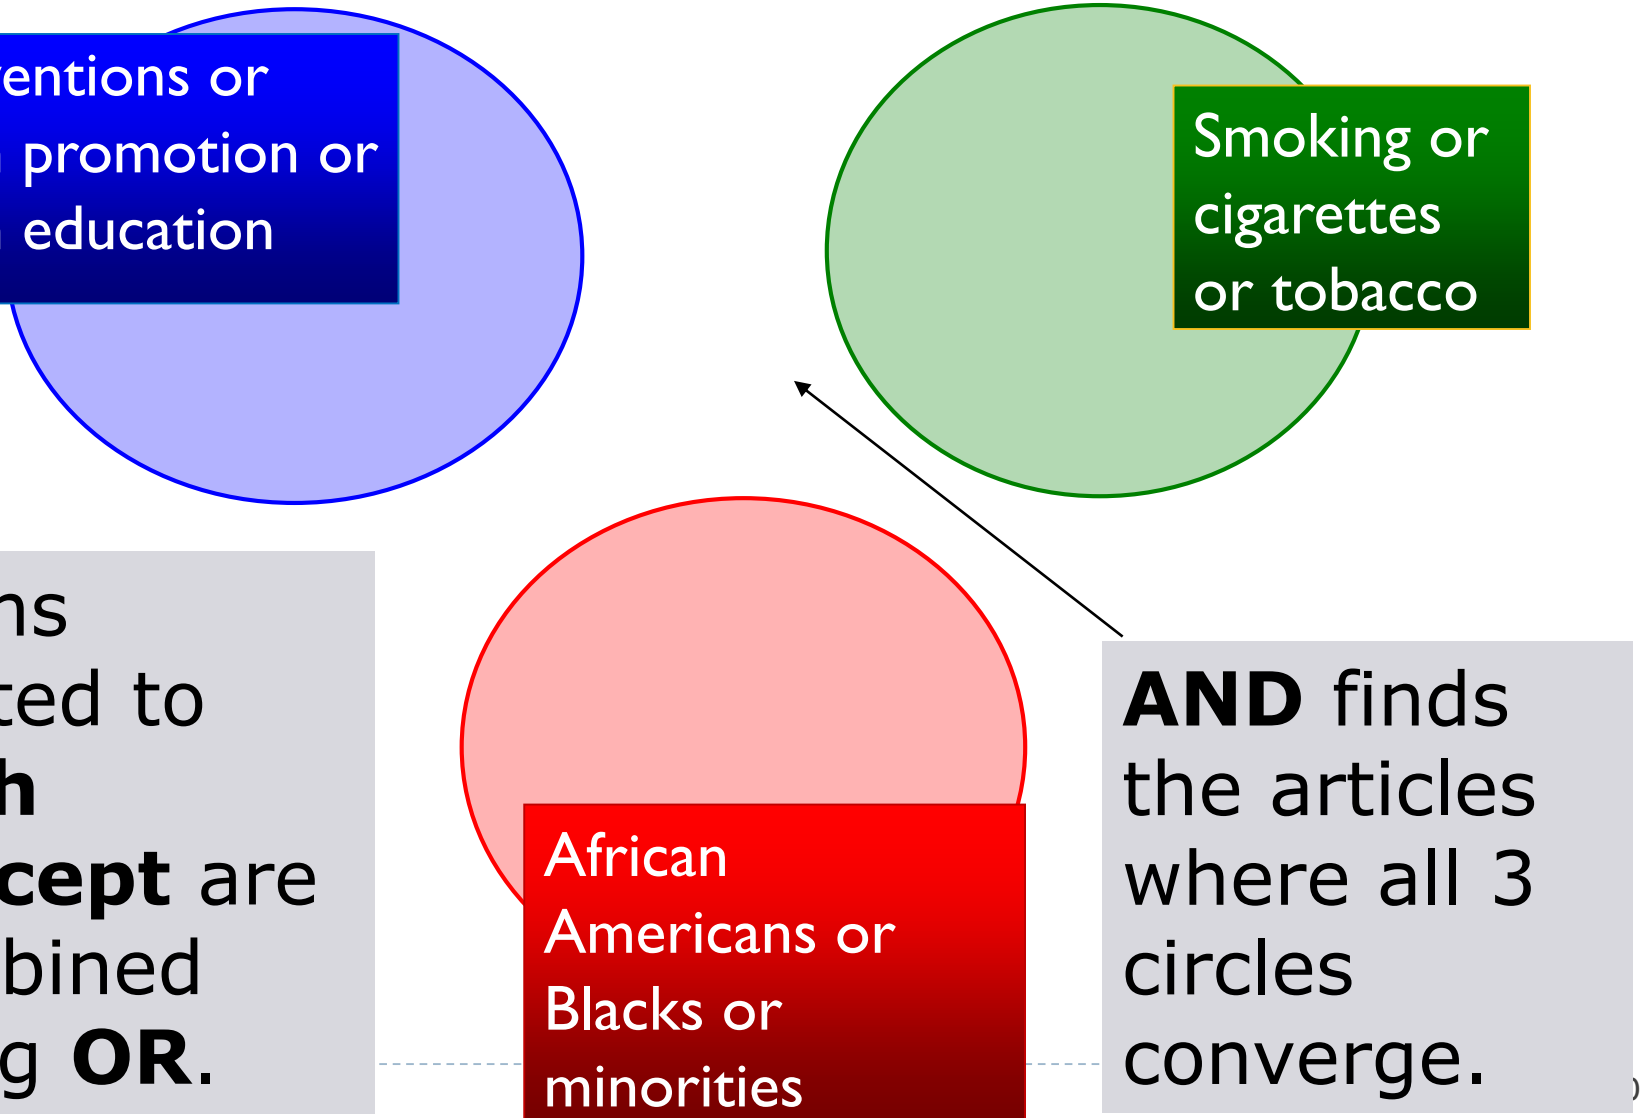

Interventions or
health promotion or
health education

Smoking or
cigarettes
or tobacco

Terms
related to
**each
concept** are
combined
using **OR**.

African
Americans or
Blacks or
minorities

AND finds
the articles
where all 3
circles
converge.

Strategy #2

Combine terms & concepts using Boolean

- ▶ Want to “google-ize” a search?
 - ▶ Use parentheses to ensure the correct order of operations
- ▶ What does this equation equal?
 - ▶ $4 + 3 \times 7 - 8$
- ▶ What does this equation equal?
 - ▶ $(4 + 3) \times (7 - 8)$

http://en.wikipedia.org/wiki/Order_of_operations

Strategy #2

Combine terms & concepts using Boolean

- ▶ What does this equation equal?

- ▶ $4 + 3 \times 7 - 8 = 17$

- ▶ According to the order of operations, multiplication and division are done before addition and subtraction.

- ▶ What does this equation equal?

- ▶ $(4 + 3) \times (7 - 8) = -7$

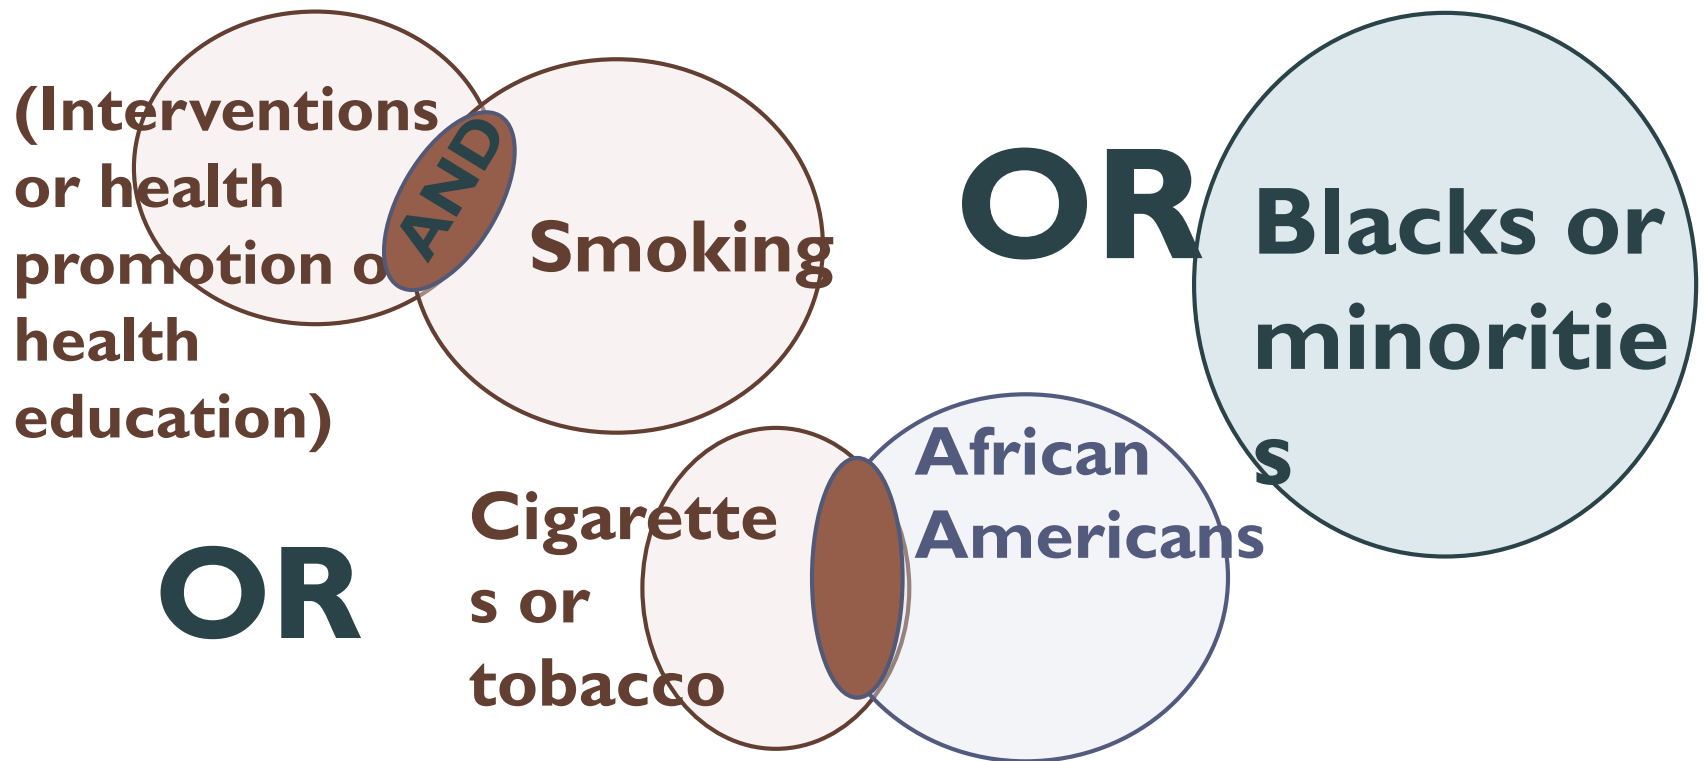

http://en.wikipedia.org/wiki/Order_of_operations

Strategy #2

Combine terms & concepts using Boolean

- ▶ This search in any Ovid database:
 - ▶ Interventions or health promotion or health education and Smoking or cigarettes or tobacco and African Americans or Blacks or minorities
- ▶ Will return:
 - ▶ (((((Interventions or health promotion or health education) and Smoking) or cigarettes or tobacco) and African Americans) or Blacks or minorities)

Articles with **((Interventions or health promotion or health education) and smoking) AND African Americans** will be returned.

Articles with **(Cigarettes or tobacco) and African Americans** will be returned.

All articles with the terms **Blacks or minorities** will be returned.

Strategy #2

Combine terms & concepts using Boolean

- ▶ Where do you think the parenthesis should go?
- ▶ Interventions or health promotion or health education and Smoking or cigarettes or tobacco and African Americans or Blacks or minorities

Strategy #2

Combine terms & concepts using Boolean

- ▶ Where do you think the parenthesis should go?
- ▶ (Interventions or health promotion or health education) and (Smoking or cigarettes or tobacco) and (African Americans or Blacks or minorities)

Strategy #2

Combine terms & concepts using Boolean

- ▶ You can “google-ize” a search but...
- ▶ Parentheses are REALLY important!
 - ▶ [Find it Fast search example no parentheses](#)
 - ▶ [Find it Fast search example parentheses](#)
 - ▶ Ovid Medline example:

# ▲	Searches	Results
1	((((Interventions or health promotion or health education) and Smoking) or cigarettes or tobacco) and African Americans) or Blacks or minorities).mp. [mp=title, abstract, original title, name of substance word, subject heading word, keyword heading word, protocol supplementary concept word, rare disease supplementary concept word, unique identifier]	14729
2	((Interventions or health promotion or health education) and (Smoking or cigarettes or tobacco) and (African Americans or Blacks or minorities)).mp. [mp=title, abstract, original title,	485

Strategy #2

Combine terms & concepts using Boolean

► Example concept cluster

# ▲	Searches	Results
1	Intervention Studies/ ►	6787
2	Health education/ ►	25557
3	Health promotion/ ►	44404
4	(intervention or health education or health promotion).ti,ab,kw. ►	341119
5	1 or 2 or 3 or 4 ►	387226

Strategy #3

Use the appropriate vocabulary

- ▶ Each database has its own unique terminology
 - ▶ Also known as a “controlled vocabulary”
 - ▶ Developed by the database producer
 - ▶ Specific to EACH database
 - ▶ Searches can look for controlled vocabulary terms
 - ▶ Previous slide— see the terms with a “/” following them?
 - ▶ Controlled vocabulary terms!

Strategy #3

Use the appropriate vocabulary

- ▶ Common controlled vocabularies
 - ▶ MeSH: Medical Subject Headings
 - ▶ Used by both Ovid/Ebsco Medline & PubMed
 - ▶ Ex. **Intervention Studies/**
 - ▶ Thesaurus of Psychological Index Terms
 - ▶ Used by PsycINFO

Strategy #3

Use the appropriate vocabulary

- ▶ What does “stress” mean to you?

Subject Heading

Dental Stress Analysis
Echocardiography, Stress
Endoplasmic Reticulum Stress
Fractures, Stress
Heat Stress Disorders
Medial Tibial Stress Syndrome
Oxidative Stress
Stress Disorders, Post-Traumatic
Stress Disorders, Traumatic
Stress Disorders, Traumatic, Acute
Stress Fibers
Stress, Mechanical
Stress, Physiological
Stress, Psychological
Urinary Incontinence, Stress

Strategy #3

Use the appropriate vocabulary

Basic Search | Find Citation | Search Tools | Search Fields | **Advanced Search** | Multi-Field S

1 Resource selected | [Hide](#) | [Change](#)

i Ovid MEDLINE(R) without Revisions 1996 to June Week 4 2013

Enter keyword or phrase (* or \$ for truncation)

☒ **Keyword** ☐ Author ☐ Title ☐ Journal

☒ **Map Term to Subject Heading**

☐ Abstracts ☐ Structured Abstracts ☐ English Language

☐ Include All Subheadings

Combine selections with:

Select	Subject Heading
<input type="checkbox"/>	Marijuana Smoking
<input checked="" type="checkbox"/>	Smoking
<input type="checkbox"/>	Smoking Cessation
<input type="checkbox"/>	smoking.mp. search as Keyword

Strategy #3

Use the appropriate vocabulary

- ▶ Many databases also have special fields that utilize a different vocabulary or codes
- ▶ Librarians frequently use them to help refine searches

Strategy #3

Use the appropriate vocabulary

▶ Example from Ovid *Medline*

▶ MeSH + subheadings

▶ / eh [Ethnology]

▶ / th [Therapy]

▶ Publication type

Title	Racial/ethnic differences in menthol cigarette smoking , population-based tobacco cessation treatments.
Source	Addiction. 105 Suppl 1:75-83, 2010 Dec.
Abbreviated Source	Addiction. 105 Suppl 1:75-83, 2010 Dec.
NLM Journal Name	Addiction (Abingdon, England)
Publishing Model	Journal available in: Print
MeSH Subject Headings	Adolescent Adult Aged Epidemiologic Methods *Ethnic Groups / sn [Statistics & Numerical Data] European Continental Ancestry Group / sn [Statistics & Numerical Data] Female Humans Male *Menthol Middle Aged *Patient Acceptance of Health Care / eh [Ethnology] *Smoking / eh [Ethnology] Smoking / th [Therapy] Smoking Cessation / eh [Ethnology] *Smoking Cessation / sn [Statistics & Numerical Data] Socioeconomic Factors United States / ep [Epidemiology]
Publication Type	Journal Article. Research Support, U.S. Gov't, Non-P.H.S..

Strategy #3

Use the appropriate vocabulary

► Ovid PsycINFO

► Key Concepts

► Subject Headings

► Classification Code

► Population Group

► Methodology

Targeting african american nonsmokers to motivate smokers to quit: A qualitative inquiry.

Publication Date Oct 2010

Year of Publication 2010

Language English

Author [Thomas, Janet L.](#); [Scherber, Robyn M.](#); [Stewart, Diana W.](#); [Lynam, Ian M.](#); [Daley, Christine M.](#); [Ahluwalia, D. S.](#)

E-Mail Address Thomas, Janet L.: jthomas@umn.edu

Digital Object Identifier <http://dx.doi.org/www5.sph.uth.tmc.edu:2048/10.11>

Key Concepts [African Americans](#), [nonsmokers](#), [motivation](#), [smokers](#),

Subject Headings [*Health Promotion](#)

[*Motivation](#)

[*Smoking Cessation](#)

[Blacks](#)

[Tobacco Smoking](#)

Classification Code [Promotion & Maintenance of Health & Wellness \[3365\]](#)

Population Group Human; Male; Female.
Adulthood (18 yrs & older)

Location US

Methodology [Empirical Study](#); [Interview](#); [Focus Group](#); [Qualitative St](#)

Strategy #4

Revise your search strategy

- ▶ Plan on doing several searches in the same database
- ▶ Use citations found in earlier searches to help develop and revise searches

1	Intervention Studies/	7141
2	health education/	25989
3	health promotion/	45286
4	(intervention or health education or health promotion).ti,ab,kw.	350541
5	1 or 2 or 3 or 4	397343
6	"tobacco use"/ or smoking/	80105
7	(smoking or cigarettes or tobacco).ti,ab,kw.	165311
8	6 or 7	184749

► Final search
► Sort of!

9	african continental ancestry group/ or african americans/	46441
10	Minority Health/ or Minority Groups/	7948
11	(african americans or blacks or minorities).ti,ab,kw.	30402
12	9 or 10 or 11	65798
13	5 and 8 and 12	516
14	limit 13 to english language	512

Strategy #4

Revise your search strategy

- ▶ Example: We didn't add smoking cessation terms to the search!

MeSH Subject Headings	Adolescent
	Adult
	*African Americans / sn [Statistics & Numerical Data]
	Counseling / mt [Methods]
	Educational Status
	Female
	Health Promotion
	*Hotlines / ut [Utilization]
	Humans
	Pregnancy
	*Pregnant Women / px [Psychology]
	Seasons
	Smoking / ep [Epidemiology]
	Smoking / ep [Epidemiology] / sn [Statistics & Numerical Data]
	*Smoking Cessation / sn [Statistics & Numerical Data]
	*Social Marketing

Strategy #4

Revise your search strategy

- Add the appropriate terms, then combine!

13	5 and 8 and 12	516
14	limit 13 to english language	512
15	smoking cessation/	19702
16	(cessation or quit or quitline).ti,ab,kw.	44033
17	15 or 16	50933
18	14 and 17	200

Search more than one db

- ▶ No one database does it all
 - ▶ Not even Google or Google Scholar
- ▶ Each db has strengths & weaknesses
- ▶ Subject listing for SPH databases
- ▶ A-Z listing for SPH databases

Strategy #6

Learn db search rules & peculiarities

- ▶ **Adjacency (proximity) searching**
 - ▶ Interface function
 - ▶ Terms must be within certain number of words from each other
 - ▶ PubMed– not allowed
 - ▶ Use “quotation marks” for phrases
 - ▶ “breast cancer screening”[tiab] OR “screening for breast cancer”[tiab]

Strategy #6

Learn db search rules & peculiarities

▶ **Adjacency (proximity) searching**

- ▶ Ovid (Medline, PsycINFO)
 - ▶ Cancer **adj3** screening
- ▶ Ebsco (CINAHL, Acad Srch Comp)
 - ▶ Cancer **n3** screening
 - Words in any order
 - ▶ Cancer **w3** screening
 - Words must be in the order entered
 - **Cancer screening** will be found; **screening for cancer** won't

Strategy #6

Learn db search rules & peculiarities

- ▶ **Search in specific fields**
- ▶ **Fields** are defined by **database producer**
- ▶ **How to** search defined by **interface**
 - ▶ Ovid databases
 - ▶ Ovarian cancer.ti,ab,kw. and english.la.
 - ▶ PubMed
 - ▶ Ovarian cancer[tiab] AND English[la]
 - ▶ Ebsco databases
 - ▶ (TI Ovarian cancer OR AB Ovarian cancer) AND LA english

Strategy #6

Learn db search rules & peculiarities

- ▶ PubMed requires CAPITALIZED operators
 - ▶ “and” vs “AND”; “or” vs “OR”; “not” vs “NOT”
- ▶ Find it Fast works differently if you capitalize operators!
 - ▶ If finds more, but the items ranked first in relevancy are really good!
- ▶ Search for phrases using “quotation marks”
 - ▶ Works in Google, too!

Six Strategies for Effective Searching

1. Create concept clusters based on the components of your topic
2. Combine terms & concepts using Boolean operators
3. Use the appropriate vocabulary
4. Revise your search strategy
5. Search more than one database
6. Learn database search rules & peculiarities
